Cannabis Use Guidelines and Recommendations for Ontario’s Campuses

Pearlyn Ng (CICMH), Tamar Meyer (CAMH), Jean Hopkins (CMHA)
About this Guide

https://campusmentalhealth.ca/toolkits/cannabis/

• Partnership between the Centre for Addiction and Mental Health, Centre for Innovation in Campus Mental Health, Canadian Mental Health Association and the Ministry of Advanced Education and Skills.
• Explores issues related to cannabis use and provides an overview of health approaches that can reduce the harms
• Inspired by CARBC’s “Clearing the Air”
• Developed to support campus professionals
• PSSP works together with partners across the province to move evidence to action in support of Ontario’s Comprehensive Mental Health and Addictions Strategy.

• Has offices throughout Ontario.

• Provides capacity and expertise in:
  – Knowledge exchange
  – Information management
  – Implementation
  – Coaching
  – Equity and engagement
  – Evaluation
Evidence Exchange Network (EENet)

We connect people with evidence.

Evidence Exchange Network helps create and share evidence to build a better mental health and addictions system in Ontario.

We’re a part of CAMH’s Provincial System Support Program.

Section 1: Cannabis and Substance Use

- About cannabis
- Cannabis use in Ontario
- Understanding substance use
- Public health and harm reduction approaches
- Prohibition/legalization paradox
About Cannabis

• Includes all products from the plant

• Contains cannabinoids, tetrahydrocannabinol (THC), and other chemicals

• Modes of consumption:
  o Inhalation
  o Ingestion
  o Applied to skin
Cannabis use in Ontario
Past Year Cannabis Use (Gr. 7-12, 2017)

Cannabis Use on Ontario Campuses

- 19% of students reported using cannabis 30 days preceding the survey
- 3% reported using cannabis almost daily

Reported use for all students within the past 30 days compared with how often students perceived the typical student on campus used substances within the same time period.

Understanding Substance Use

Abstinence

Non-problematic

Beneficial

Problematic

Potentially Harmful

Substance Use Disorder

Public Health Approach

- Promotes health of whole population while focusing on those at risk
- Public health approach to cannabis seeks to reduce harms and use targeted measures for those at increased risk
- Legalization and regulation allow cannabis use to be treated as a health issue

CPHA, 2014; CAMH, 2014; Task Force on Cannabis Legalization and Regulation, 2016
Harm Reduction

• Harm reduction are any efforts to reduce harms associated with substance use
• Acknowledges some may not be able to or want to stop using
• Recognizes right to choose and respects individuals
• Promotes safer use to prevent harms

International Harm Reduction Association, 2010;
Canadian Nurses Association Canadian Association of Nurses in AIDS Care, 2012
Prohibition and Legalization Paradox

Cannabis Policies and Harm: A Conceptual Model

Adapted from Apfel 2014. Cannabis: From Prohibition to Regulation.
About the Canadian Mental Health Association, Ontario Division

Founded in 1952, the Canadian Mental Health Association (CMHA), Ontario, is a non-profit, charitable organization committed to making mental health possible for all.

CMHA Ontario works closely with its 30 local branches in communities across the province to ensure the utilization of best practices in the organization, management and delivery of services to consumers and families of individuals with mental illnesses, dual diagnosis and concurrent disorders.

All CMHAs in Ontario work in a variety of partnerships to provide a coordinated, continuum of care using the social determinants of health model.
Consistent evidence that links frequent, early onset cannabis use with negative effects, including mental health problems.

About 33% of Canadians aged 15 and older who used cannabis in the past three months in 2015 reported that they consumed daily or almost daily.

Research shows that it is a risk factor for the development of psychosis, especially if there is a personal or family history of psychosis, or cannabis is used frequently.

For young adults who have psychosis, ongoing cannabis use can worsen symptoms over the long term.

Symptoms such as depression, insomnia, anxiety and disturbances in appetite are also reported by some cannabis users in the context of withdrawal from high-frequency use.

A campus approach that provides education, health promotion and harm reduction strategies can assist in minimizing potential harms and assist students in making informed decisions about their substance use.

Language and Stigma

The language we use is an important component in reducing stigma and breaking down negative stereotypes associated with substance use.

It is recommended to use language that is neutral, precise.

It is also recommended to use ‘people first’ language that focuses on the individual, not the action.
Stay open, objective and non-judgemental when a student speaks about substance use.
Listen carefully and seriously when a student discusses using either medical or non-medical cannabis for coping with specific symptoms or conditions.
Share accurate information and avoid lecturing. Be compassionate and curious about the student’s perception and experience with cannabis use.
Educate yourself and use facts where you can.
Match the language that the student is using. For example, if a student uses the word ”weed,” do so as well.
Don’t assume that you know a student’s experiences, feelings, or interest in cannabis.
Canada’s Lower-Risk Cannabis Use Guidelines (LRCUG)

Recommendations

- Cannabis use has health risks best avoided by abstaining
- Delay taking up cannabis use until later in life
- Identify and choose lower-risk cannabis products
- Don’t use synthetic cannabinoids
- Avoid smoking burnt cannabis—choose safer ways of using

- If you smoke cannabis, avoid harmful smoking practices
- Limit and reduce how often you use cannabis
- Don’t use and drive, or operate other machinery
- Avoid cannabis use altogether if you are at risk for mental health problems or are pregnant
- Avoid combining these risks

More information:
Section 3: Developing, implementing, & evaluating a cannabis-use framework for your campus

A. Considerations For Your Campus

B. Developing a Cannabis Use Framework

C. Implementing and Evaluating Your Framework
Considerations For Your Campus

- Stakeholders
- Campus climate
- Harm reduction lens
- Medical use
Developing a Cannabis-Use Framework

Campus culture and context
- Timing of use
- Prevalence of use
- Champions on campus

Increasing personal confidence of staff and students to discuss problematic cannabis use
- Harm reduction
- Build capacity
- Cultivate a sense of community

The academic and personal development of students
- Tools to manage stress and mental health challenges
1. Minimum Age  
   a. 19 and older

2. Possession  
   a. 30 grams of dried cannabis

3. Places of Use  
   a. Prohibited in all public places  
   b. Permitted only in private residences – Campuses will be able to decide if on-campus student residences will be considered private residences.

4. Enforcement  
   a. *Smoke Free Ontario Act* imposes penalties for cannabis in public. Campuses need to decide if penalties will be imposed

5. Retail and Distribution  
   a. Only sold through the Ontario Cannabis Store

---

https://www.ontario.ca/page/cannabis-legalization
Implementing and Evaluating Your Framework

Indicators of implementation success

• Adherence by students and staff
• Awareness of framework components among staff and students as well as cannabis users and non-users
• Perceptions of enforcement
• Rate of complaints
• Impact on cannabis use among different groups
• Framework objectives met
• Level of support for potential changes to the framework
